Influences of Interface and Dislocation Behavior on Microstructure Evolution: Volume 652

M. Aindow

This 2001 publication contains a vast diversity of issues which are crucial to predicting and controlling the advance of microstructure, together with grain boundary motion; dislocation patterning and plasticity; interfacial anisotropy and chemistry; phase, defect, and interface interaction; and solidification. Those topics have lengthily supplied the fundamental, clinical questions of fabrics research, and but have usually been handled separately. A huge aim of the quantity is to supply a discussion board for interplay between staff in those occasionally disparate fields. As is evidenced by way of the papers presented, advances in experiment, computation and thought at the moment are offering very important connections not just among the multiple-length and time scales linked to those phenomena, but in addition among the phenomena Influences of Interface and Dislocation Behavior on Microstructure Evolution: Volume 652 themselves.
